

DRM MSM Display and Graphics Update

Abhinav Kumar, Qualcomm Innovation Center Inc
Dmitry Baryshkov, Linaro Ltd
Rob Clark, Google (ChromeOS)

MSM Display upstream driver timeline

Originally authored by Rob and Archit Taneja and maintained by Rob Clark since then

sc7180,
sc7280
Chrome with DP/eDP/writeback support

Massive driver supporting multiple chipsets with a rich feature set , bug tracking and IGT-based CI merge process (thank you Rob, Collabora, Linaro and upstream community)

sdm845 Chrome (DPU driver landed upstream . Thank you Sean Paul !)

Delayed push and inflection point

Why Upstream push now?

Continued support for
Compute programs

Support for Open platforms

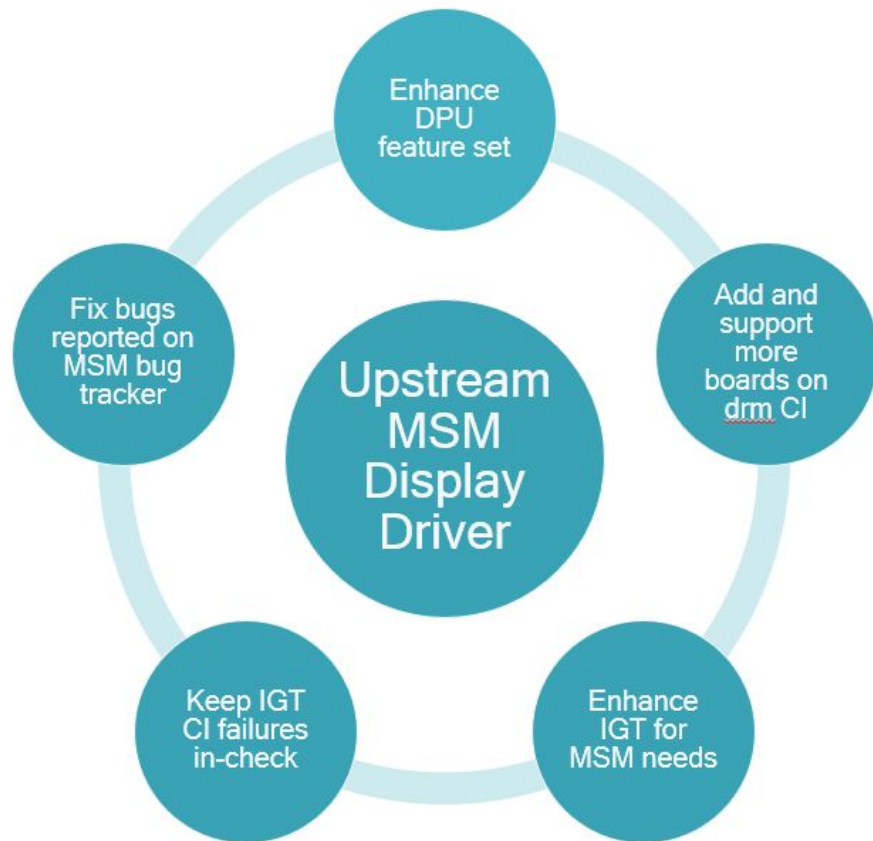

Android GKI

Carry on the good
work!

QC's upstream driver strategy

GPU status

- ~30 models of adreno supported, back to a2xx
 - a730 and a740 landing in v6.7
- devcoredump for gpu hang and fault debugging
 - Crash telemetry useful for long-tail issues
- drm_gpu_scheduler for job scheduling
- Full GEM eviction support
 - CrOS leans heavily on zram for low RAM devices
- Recent work:
 - Userspace iova allocation
 - Lockdep vs runpm/icc/pmqos vs fence signalling annotation
 - Submit ioctl overhead opts (v6.6)
- Future work:
 - Userptr (discontiguous)
 - vm_bind?

DRM CI

Platform support

mdp4: legacy

- 3.12 only MSM8x60 / APQ8064 are supported

mdp5: maintenance mostly

- 3.14 3 (msm8974, two kinds, apq8084)
- 4.1 4 (msm8916)
- 4.2 5 (msm8994)
- 4.4 6 (msm8996)
- 5.0 7 (msm8917)
- 5.4 8 (msm8998)
- 5.5 9 (msm8976)
- 5.8 10 (msm8936)
- 5.9 12 (sdm660, sdm630)
- 5.16 13 (msm8953)
- 6.5 14 (msm8226)

Platform support

DPU, newer driver for new platforms

- 4.19 1 (sdm845)
- 5.6 2 (sc7180)
- 5.13 5 (sc7280, sm8150, sm8250)
- 5.18 8 (msm8998*, qcm2290, sc8180x)
- 6.2 9 (sm6115)
- 6.3 13 (sc8280xp, sm8350, sm8450, sm8550)
- 6.5 15 (sm6350, sm6375)
- 6.6-rc 16 (sm6125)
- pending:
 - sm7150, sdm670, sdm660* / sdm630*
 - msm8996* / msm8937 / msm8917* / msm8953* (experimental support, WIP)
 - patches for new platform at the announcement day

(*) - migration from the MDP5 driver

Current features

- DSI
 - normal and bonded, command and video
- DP/eDP
 - 0 failures in CTS (PHY, Link and Test Pattern using IGT)
- HDMI
- Full `drm_bridge / drm_bridge_connector` chains
 - except apq8064 LVDS
- CTM support (no gamma/degamma yet)
- Writeback support (depending on the platform)
- eDP PSR support (disabled by default)
- DSC 1.1 / 1.2 support (depends on platform, DSI-only, DP is pending)
 - Driving force behind DSC panels support
- Devcoredump for DPU

Upcoming display features from QC

- Color pipeline for HDR displays
- Concurrent writeback support
- DP MST
- Command mode - Video mode switch for MIPI DSI panels
- Simulation panel framework for MIPI DSI panels
- YUV output over DP
- DSC over DP

Upcoming features continued

- Virtualized DRM planes
- DSI: proper handling of link power up
- DP: USB-C uABI design and implementation
- Blending improvements (more planes, less bandwidth)

Development stats (next-20231013)

- 3352 non-merge commits
- 288 contributors
- Largest contributing parties (> 20 commits)
 - Qualcomm, 900 commits
 - Linaro, 756 commits
 - Google / Chromium, 543 commits
 - Intel, 114 commits
 - SoMainline (*), 111 commits
 - Jonathan Marek, 60 commits
 - SuSE, 43 commits
 - Huawei, 42 commits
 - Collabora, 24 commits
